Amersham ECL™: Your solution for better Western Blotting

Amersham ECL is the original chemiluminescent reagent for Western Blotting, and is still the most widely used. It is available in four varieties, depending on your application needs.

- ECL- routine protein detection and analysis
- ECL Plus- versatile protein measurement for confirmation or quantitation, with flexible fluorescent or chemiluminescent detection
- ECL Advance- efficient use of precious primary antibodies
- ECL Plex- optimized system for quantitative multiplex analysis

All ECL reagents have been optimized for use with GE Healthcare's Rainbow Markers and other related reagents, including a full line of supplemental membranes customized for use in protein transfers and/or Western Blotting applications.
